

**IN THE ABSTRACT:**

Please amend the abstract as follows:

~~Information other than the result of correctly processing information can be reproduced. The~~ An information processing system ~~comprises~~ includes an information processing unit means-3, an information changing unit means-5, and an information reproducing unit means-4. ~~The information changing means-5 changes the result of processing, obtained by the information processing means-3. The information processing unit means-3 processes the information received by a sensor 2 and transmits the result of processing to the information reproducing unit means-4. The information changing unit means-5 adds or deletes information to or from the result of processing, obtained by the information processing unit means-3, by using an information analysis unit and a change-processing unit. If the information processing is interpretation that includes voice recognition, translation and voice synthesis, the first language received by the sensor 2 is translated into the second language by the information processing unit means-3 and is reproduced by the information reproducing unit means-4.~~
